

# Civil Engineering Concrete Construction

## Service: Civil Engineering Concrete Construction

---

Trueform undertakes reinforced concrete construction work for civil engineering and groundwork projects across Wales and the UK. We understand that the best way to ensure the best possible outcome for any building construction project is through collaboration.

Trueform ensures that the best trained professionals, registered to Construction Skills Certification Scheme (CSCS) standards, are available to work on your project to produce the highest standards of both work and safety. Trueform is the only specialist formwork, steelfixing and concrete contractor in Pembrokeshire, West Wales.

The continued success of Trueform is based upon four cornerstones: Collaboration, innovation, safety and quality.

### Our past civil engineering work has included:

- Concrete Bridge Construction
- Highway construction
- Water treatment facilities
- Coastal defences
- Power float slabs
- Diamond drilling
- Concrete repairs

### The Benefits

- Trueform's approach to project management ensures that every project is completed as efficiently as possible and on time, without compromising on quality
- Our highly trained staff work to exacting standards and their expertise contributes to the successful completion of every project
- We are able to work closely other construction companies to provide a safe working environment for all employees, and have achieved the CHAS (Contractors Health & Safety Assessment Scheme) accreditation for safe working.
