

Reinforced Concrete Contractors

Service: Reinforced Concrete Contractors

Trueform are specialist reinforced concrete contractors, services include formwork, falsework, steel fixing and the fabrication of reinforced concrete structures for a wide range of applications throughout Wales and the UK. Our team of highly trained employees are registered with the Construction Skills Certification Scheme (CSCS), which means our contractors have a proven level of competency in the field of building construction.

We are able to guarantee a consistently high standard of work through the use of the latest building techniques and methods, and the quality management systems we have in place help us to achieve this. Trueform works with suppliers such as PERI systems and RMD Kwikform to obtain the best results in formwork and reinforced concrete construction.

We always encourage our prospective customers to consult with us during the feasibility, design and/or planning process. We are confident that our early involvement will yield benefits in both time and money.

Some of our past projects using reinforced concrete have included:

- Reinforced Concrete Bridges
- Retaining walls
- Coastal defences
- Waste water treatment works

The Benefits

We have years of experience working on reinforced concrete construction projects, which allows us to give our customers the highest possible standard of service. We believe that our quality and expertise in the field of structural engineering help to drive the repeat business that we continue to generate.
